

Multiple Options for Order Communications

Flexibility to fit your needs

Because every facility is different, it is sometimes difficult to make one solution-fit-all scenarios. After 20 years in the business, we understand this and so we've developed the following options to allow you to make the choice that best fits your facility's order communication needs.

CLIN1 ORDERS

If you just need to communicate orders to the laboratory, radiology, and therapy related departments, CLIN1 Orders will do the job for you. Standing orders as well as one time ordering can be generated. Also supports multiple routes for sample collection at multiple facilities.

CLIN1 ENTERPRISE SCHEDULING

In addition to the features offered with our CLIN1 Orders option, we offer a full featured Enterprise Scheduling System for scheduling and ordering for all clinical departments. Track schedules for patients, staff and resources. Our Enterprise Scheduling System improves interdepartmental communications without extra time or effort. Appointment Notification option is also available.

CLIN1 WEB PORTAL

For those facilities that need to extend their ordering and results reviewing capabilities outside the facility's intranet, CLIN1 Web Portal allows that access to the world for authorized users. Provide your physicians with their patient's information no matter where they reside. Flexible security allows you to tailor access. As long as they can access the internet, your physicians can order procedures, review results, and view their patient's reports simply and efficiently.

CLIN1 NURSING

Integrated with our CLIN1 Orders, CLIN1 Laboratory and CLIN1 Radiology, CLIN1 Nursing gets your orders to the individuals that need them at the speed of light. Built-in audit trails document each step of patient services from the moment the order is entered to the instant the last lab result is ready for review by your clinical staff.

FEATURES:

- Automatic notification for receiving department (labels, requisition or screen pop-up)
- Patient data validation
